

CZVR Terminal Standard Operating Procedures

Purpose: This order provides supplemental direction for operation of Terminal airspaces within Vancouver FIR.

Procedures:

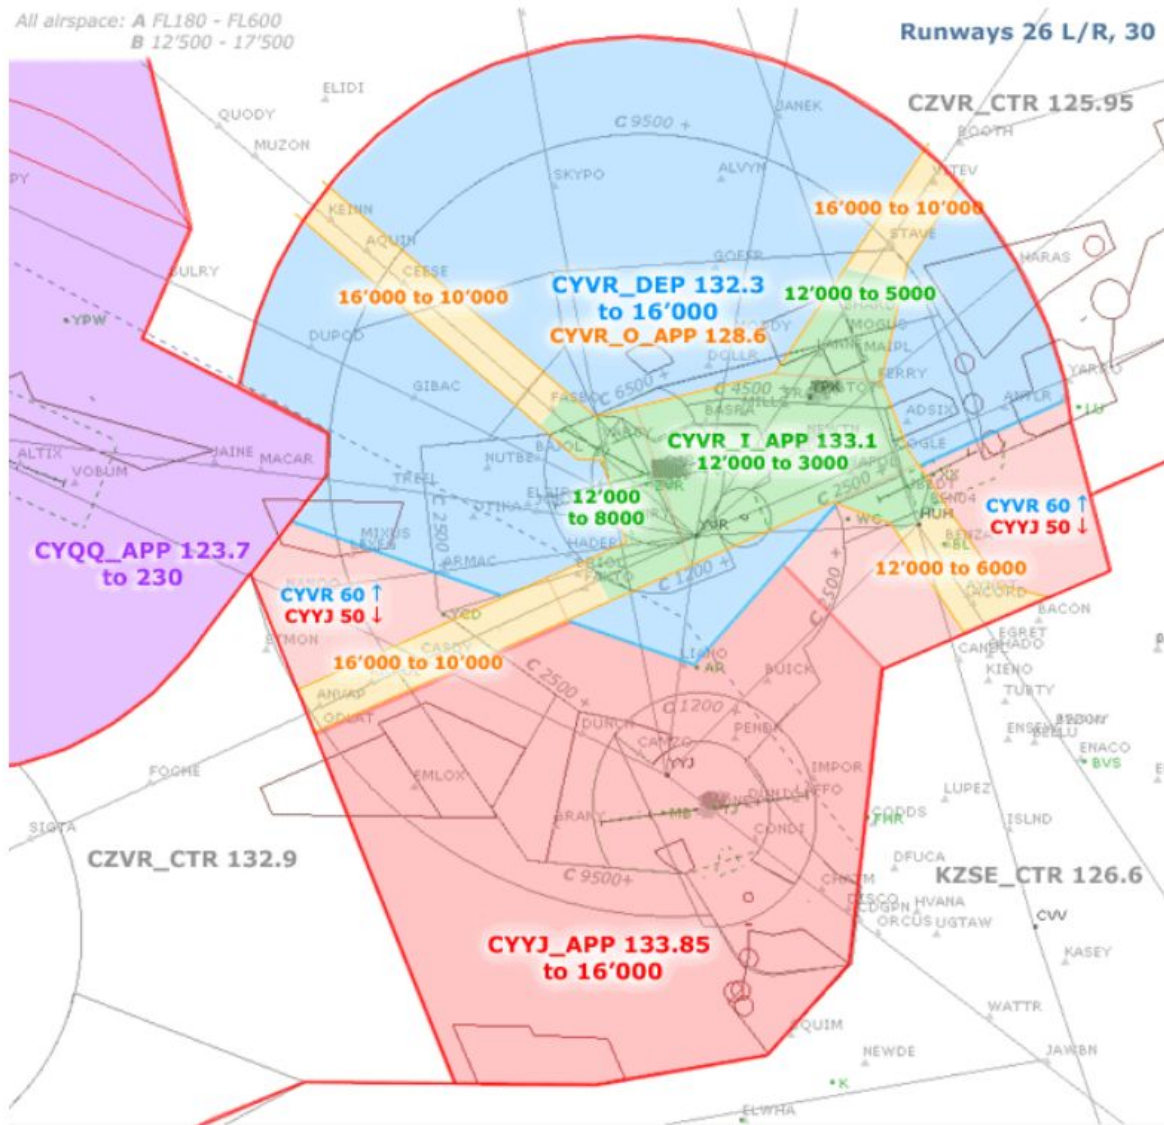

- When signing on with aircraft already in your airspace, consider them already surveillance identified. Assign a new squawk only if needed.

- When Victoria Terminal is offline, Vancouver Terminal controls Victoria Terminal airspace. Vancouver Terminal does not control the Comox Terminal airspace.

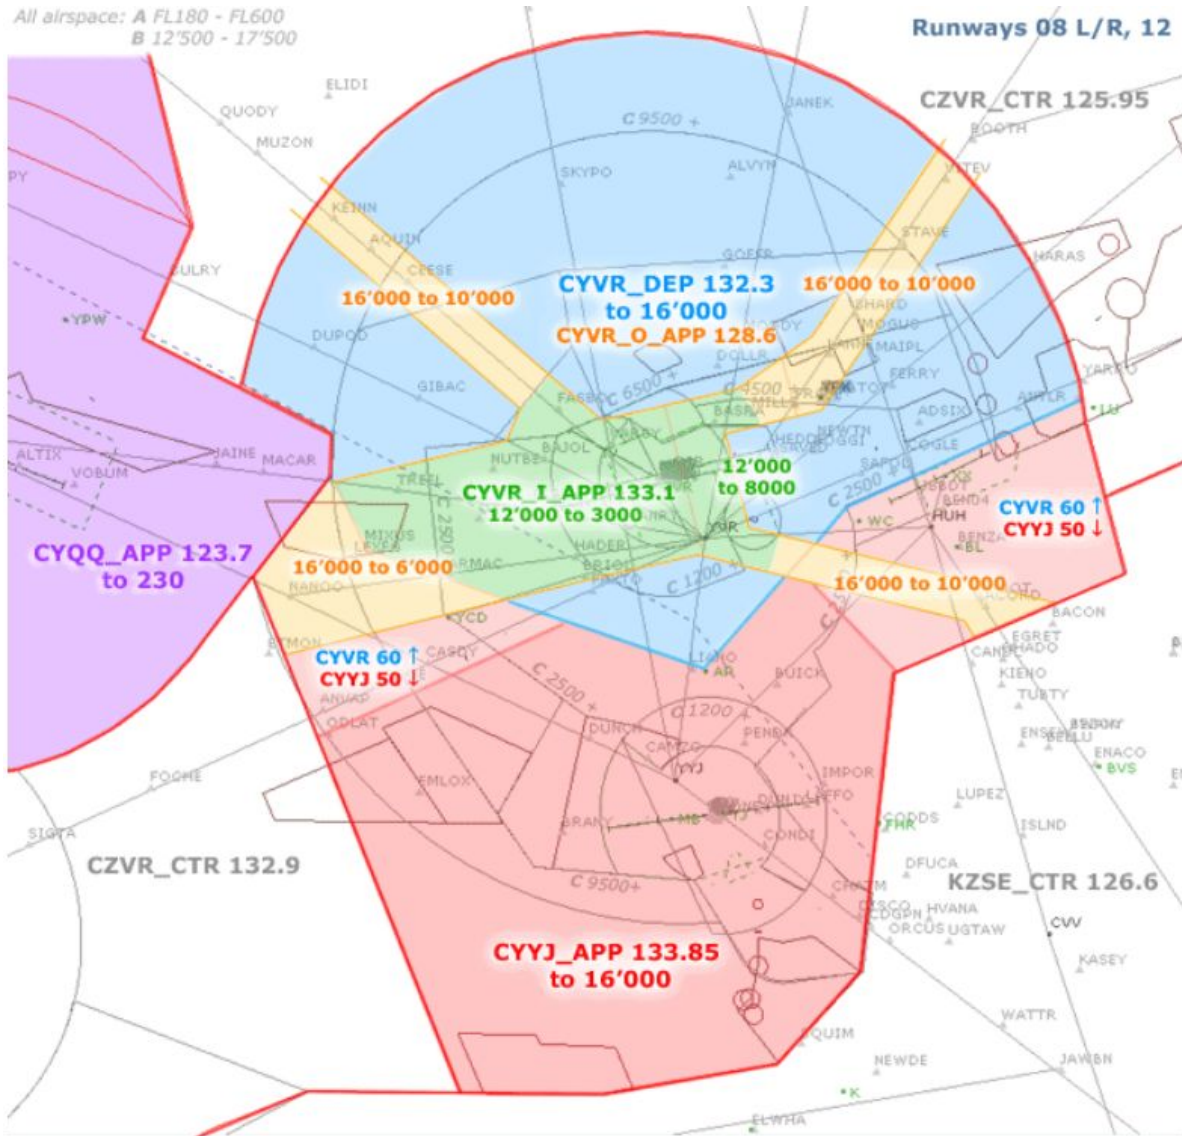

- When both Vancouver Arrival and Vancouver Departure are online and Victoria Terminal is not, Vancouver Departure controls the Victoria Terminal airspace.

- Because the two main runways (08s/26s) are not far enough apart, true parallel runway operations are not possible in Vancouver. Arrival must ensure that aircraft arriving on both runways are adequately separated and will be able to maintain separation during all phases of the approach.

Airspace Diagrams:

All airspace: A FL180 - FL600
B 12'500 - 17'500
